

MyZippy.app Launch Blueprint

A complete development and launch roadmap for MyZippy.app — an AI-powered revenue recovery system for small business owners.

Project Vision

- Build MyZippy.app as a mobile-first revenue recovery system.
 - Use HighLevel as the backend CRM and automation engine.
 - Help small businesses never miss a call, client, or dollar again.
 - Provide one simple app for missed calls, leads, AI follow-up, booking, and social posting.
-

Recommended Tech Stack

- Frontend: React Native or Flutter
 - Backend: Node.js / Python / Supabase
 - Database: PostgreSQL / Supabase
 - Authentication: OAuth / JWT
 - AI Assistant: OpenAI API
 - CRM & Automation: HighLevel API
 - Push Notifications: Firebase or OneSignal
 - Payments (Future): Stripe or RevenueCat
-

MVP Screens

- Login / Sign-Up
 - Home Dashboard
 - Missed Calls
 - Lead Inbox
 - Zippy AI Assistant
 - Booking Calendar
 - Social Post Creator
 - Website / Edit Request
 - Settings
 - Admin Dashboard
-

Core Features

- Missed-call text-back automation
 - AI-powered customer conversations
 - Lead tracking and notifications
 - Unified inbox for customer messages
 - Booking/calendar integration
 - AI-generated social media content
 - Client website management
 - Push notifications
-

HighLevel Integration Requirements

- Connect Contacts API
 - Connect Conversations API
 - Connect Calendars API
 - Connect Opportunities API
 - Use webhooks for automation events
 - Push all lead activity into HighLevel
 - Use HighLevel as primary CRM backend
-

Missed Call Recovery Workflow

- Customer calls business
 - Call is missed
 - Automatic text-back sent instantly
 - Lead appears in MyZippy.app
 - Zippy AI follows up
 - Appointment booking offered
 - Business owner notified
-

Unified Inbox Requirements

- SMS conversations

- Website chat
 - Facebook Messenger
 - Instagram DMs
 - Missed-call replies
 - Conversation source tags
 - Quick reply buttons
 - AI response option
-

Social Media Hub

- Generate Facebook posts
 - Generate Instagram posts
 - Generate LinkedIn posts
 - Generate Google Business Profile posts
 - Copy/export content
 - Future direct posting integration
-

Zippy Rep Program

- Every rep receives a unique referral link
 - Automatic referral tracking
 - Automatic commission attribution
 - Admin dashboard for rep performance
 - Track clicks, leads, appointments, and sales
 - Integrate referral data into HighLevel
-

Example Referral Links

- myzippy.app/john
 - myzippy.app/sarah
 - myzippy.app/?ref=JOHN01
-

Rep System Workflow

- Rep shares custom referral link

- Lead visits landing page
 - Referral cookie/session stored
 - Lead form submitted
 - Lead enters HighLevel
 - Rep attribution automatically assigned
 - Commission tracked
-

Admin Dashboard Features

- Create and manage reps
 - Generate referral links
 - Track lead volume
 - Track customer conversions
 - Track recurring revenue
 - Track commissions
 - Enable/disable features
-

Client Onboarding Process

- Create client in HighLevel
 - Connect phone number
 - Set missed-call workflows
 - Connect calendar
 - Configure AI assistant
 - Connect website
 - Create app login
 - Run full system test
 - Launch client account
-

App Store Launch Requirements

- Apple Developer Account
- Google Play Developer Account
- App icon and screenshots
- Privacy Policy
- Terms of Service

- Support email
 - App descriptions
 - Reviewer test login
 - AI/data disclosure
-

Questions for Developer

- Can you fully integrate HighLevel APIs?
 - Can you build both frontend and backend?
 - Can you build a scalable referral system?
 - Can you assist with App Store submissions?
 - Can you build MVP first before full-scale version?
-

Final Recommendation: Build the MVP first using HighLevel as the automation backbone. Launch a polished working version focused on missed-call recovery, AI lead handling, and booking automation before expanding into advanced social and multi-platform integrations.
